                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to identifying a stress condition to which a plant replaced, comprising: (a) contacting nucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile-of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing pith increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (AB212196-AB217574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               575
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  830
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              710
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   815
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                533

                                                                                                                                                                                                   g
          care useful for producing transgenic plants such as maize, soybean, surflower, sorghum, canola, wheat, alfalfa, cotton, rice, barley and millower, sorghum, canola, wheat, alfalfa, cotton, rice, barley and cativity to forgium and cyclin-dependent kinases. The DNA sequences are also useful as probes for detecting deficiencies in the lavel of mRNA in screening for desired transgenic plants, for detecting mutations in the gene, for monitoring upregulation of expression or changes in enzyme activity in screening assays of compounds, for detecting any number of allelic variants, orthologs or paralogs of the gene, and site-directed mutagenesis in eukaryotic cells. The DNA sequences are also useful for recombinant expression of the encoded polypeptides and as immunogens for preparaing and screening antibodies. A transgenic plant comprising an expression cassette including a cell cycle regulatory gene is useful for assaying enzyme agonists and antagonists, and as immunogens or antigens to obtain antibodies. The antibodies are useful in essaying enzyme agonists and antagonists, for identifying and isolating nucleic acids from other species, and for purification of the proteins or an objective control of the proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1341 cacracecrrecretecrecretricetrecretrecricetrecricetrecricitrateraterater

AACTIOT to AACT8448 encode the human cancer associated proteins given in AAB43398 to AAB4239. The proteins can have activities based on the tissues and calls the genes are expressed in. Example of activities conclude: cytostatic; proliferative; vulnerary; immunomodulator; conclude: cytostatic; proliferative; vulnerary; immunomodulator; antidabetic; antidabetic; antidabetic; antidabetic; antidabetic; antidabetic; antidabetic; antidabetic; antidabetic; antidabetic; antidabetic; antidabetic; antidabetic; antidabetic; antidabetic; antidabetic; conclude: cytostropic; antipsoriatic and antianglogenic. The nootropic; vasotropic; antipsoriatic and antianglogenic. The notropic; vasotropic; antipsoriatic and antianglogenic. The polymolectides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Collymolectides, polypeptides, antibodies, agoniets and antagonists from the proliferation, differentiation or mobilisation of immune cells, to traat disorders of haematopoietic cells, autoimmune cells, to traat disorders of haematopoietic cells, autoimmune cells. Inflammation, cancers, cardiovascular disorders, neuclodies and disease and creatial or viral infections. The peptides, nucleotides, antibodies, agonists and antagonists may be also be used in the exemplification of the breaser invarian

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       633                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel isolated nucleic acids comprising sequences encoding peptides useful for treating or diagnosing e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes primer sets for synthesising 5602 full-length CDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dr primer and an oligonucleotide complementary to the complementary strand of a polymudicotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the comprises of a polymucleotide which comprises a 5'-end
                                                                                                                                                                                                                                                                                                                                                                                                   88
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Primer sets for synthesizing polymucleotides, particularly the 5602 full length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.

sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least less that the comprises at least libraries and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the fill-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13632 to AAH13632 to AAH13632 represent human amino acid sequences; and AAH13622 represent coligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ccesesaderrearerreaacaccacacrrragecaagrarrrearesagecreae 1034
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     595

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a combination comprising cDNAs or their complements that are differentially expressed in respiratory disorder. The combination is useful for preparing a composition for diagnosing or treating respiratory disorders e.g. lung cancer, chronic obstructive pulmonary disease, emphysema or asthma. The present sequence represents human cDNA differentially expressed during lung cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  rccachccaachtragchrordcagadachcroranargegergegarraggarc

The present sequence encodes a human cyclin related protein (HCRP)
designated HCRP-2 HCRP proteins can be used to treat cancer e.g.
denocarcinoma, leuksemia, etc. or immune disorders e.g. tabb, asthma.

They can also be used to treat developmental disorders, e.g. renal
tubular acidosis, cerebral palsy HCRP-2 was expressed in cancerous and
total tissues, and increased expression was proposed to be associated
with cancer and decreased expression with developmental disorders. HCRP
with cancer and decreased expression with developmental disorders. HCRP
can be used to screen for agonists (useful to treat conditions as above)
or antagonists. It can be used to generate antibodies, useful as
antagonists or to diagnose conditions characterised by HCRP expression
and to monitor therapeutic interventions. Polynuclectides encoding HCRP
can be used to detect polynuclectides encoding HCRP, e.g. to diagnose
diseases relating to polypeptide expression or monitor HCRP regulation
diseases relating to polypeptide expression or monitor HCRP regulation
of units pherapeutic intervention. They are useful to produce complementary
or antisense sequences for therapeutic administration to modulate or
control HCRP expression e.g. to treat or prevent cancers as above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ť.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human cyclin related protein, HCRP - useful, e.g. to diagnose and treat cancer, immune disorders and developmental disorders and screen for antagonists used to treat cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        3; Gaps

                                                                                                                                                                                                                                     This invention relates to a novel method for cloning and preparing human cyclin B2, the invention comprises CDNA and protein sequences for human cyclin B2 and reverse transcriptase (RT-) FOR primer sequences for human polylinker sequences that may be used in the cloning method. The invention also comprises a method for generation of an anti-cyclin B2 antibody and methods for its use. The present sequence represents the human cyclin B2 cDNA sequence of the invention
Process for preparing human cycline B2 gene cloning and anti-cycline B2 antibody, and usage thereof.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    596 AGCTTTACACCTTTTACAGAGAAAATGAGGCTAAGAGTTGTGTAAGGCCCAGATTACATGT

orditions, comprising measuring the expression levels of particular genes (1) in a test sample or determining the expression profile of a genes (1) in a test sample or determining the expression profile of a genes group in the sample comprising genes selected from (1). The method is useful for examining the ischaemia condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (ABI99202 to ABI99912, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression indicator when screening for ischaemic condition-improving drugs or indicator who screening for ischaemic condition-improving drugs or primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                          Examining the ischemic condition (e.g. occlusive ischemia) by measuring expression levels of particular genes defined in the specification or by determining the expression profile of a gene group comprising these

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1, Sequence 17, 7

Sequence 8, Application US/08692787;
Patent No. 5882864
GENERAL INFORMATION:
APPLICANT: An, Gang
APPLICANT: Ralph, David
APPLICANT: Veltri, Robert
TITLE OF INVENTION: BIOWARKERS AND TARGETS FOR DIAGNOSIS,
TITLE OF INVENTION: DISEASE
NUMBER OF SEQUENCES: 82
CORRESPONDENCE ADDRESS:
ADDRESSEE: Arnold, White & Durkee
STREET: P.O. Box 4433
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            COMPUTER READABLE FORM:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                Sequence
